A930 and A940

Plastic exposed cisterns
DUAL and START-STOP

Universal WC Cisterns with easy installation

The plastic cisterns A930 and A940 offer a practical solution focused on water savings and simple installation. The A930 cistern features **dual flush functionality**, while the A940 uses a **START-STOP system** allowing interruption of flushing. Both types are equipped with high-quality fill and flush valves and enable water connection from three sides, ensuring maximum installation flexibility.

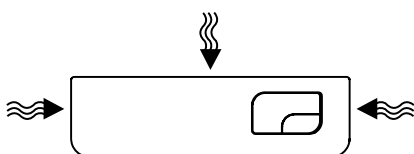

Plastic exposed cisterns A930 and A940

A930 DUAL 3/6 l

Thanks to two separate buttons, you can easily choose between a small and a large flush, while the water volume can be individually adjusted to your preferences.

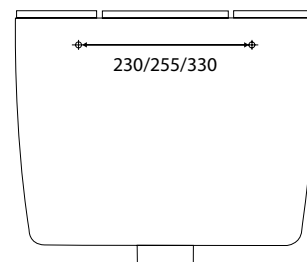

A940 START-STOP Ecology

Press one side to activate the flush, press the other side to stop it at any time. You only use as much water as is actually needed.

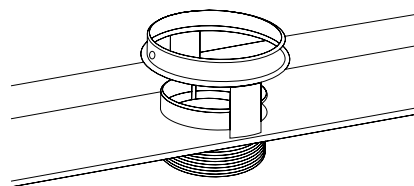

Water connection from three sides

Both cisterns allow water connection from three sides – left, right, and rear.

Faster toilet cistern replacement

The spacing of the mounting holes for the bracket is compatible with the established market standards while also maintaining compatibility with the original mounting system. That means when replacing an older Alca cistern, the original brackets can be used.

Easier toilet cistern installation

The pre-installed flush valve and reduced number of parts required for the assembly significantly simplifies and speeds up the installation of the cistern.

Exposed cisterns overview

There are basic product variants for the middle level cistern position as well as a universal versions containing complete accessories.
